Website: vinty.dev

Professional Statement

A motivated full stack software developer with a strong foundation in creating scalable, user-focused mobile/web applications. Experienced in agile teams with a passion towards creating structured, thoughtful and maintainable software. Eager to consistently learn and evolve.

Main Technical Skills

Programming Languages: TypeScript, JavaScript, Java, C#, SQL, Python, Bash.

Front-End Frameworks: React/React Native, Tailwind/Nativewind, Bootstrap, Razor.

Back-End Frameworks: .NET, Node.js SpringBoot, EntityFramework, Identity.

Tools: Git, GitHub, MongoDB, MSSQL, Firebase, Teamwork, RevenueCat, Docker, Kubernetes.

Methodologies: Agile, Waterfall, DevOps.

Architectural Design Patterns: MVC, Layered, Microservices, Event-Driven.

CI/CD: Jenkins, GitHub Actions, SonarQube.

Work History

Junior Programmer — Full Stack Mobile Development (React Native)

TheGameCreators • Remote

September 2025 — July 2026

Architected, developed and delivered new features and enhancements across Theory 4 in 1 Test Kit and ADIHubb, building scalable React Native solutions for iOS and Android used by over one million learners and driving instructors.

Roles & Skills:

- Collaborated with designers, testers, and stakeholders throughout the development lifecycle to deliver production-ready features aligned with business requirements.
- Contributed to the maintenance and modernisation of a large legacy codebase, improving code reuse, maintainability, and long-term scalability.
- Participated in code reviews and agile development processes, contributing to the continuous improvement of development workflows.
- Integrated in-app purchases, deep linking, notifications, and other mobile platform capabilities to support user engagement and commercial objectives.
- Designed and implemented a custom messaging REST API between instructors and learners, replacing a third-party provider to reduce operational costs while improving flexibility and control over future feature development.
- Implemented Firebase analytics and event tracking to measure feature adoption, user behaviour, and business performance.

Head Waiter

Roots • Renfield St, Glasgow

May 2024 — August 2025

Waiter

Mediterraneo • Ingram St, Glasgow

March 2022 — March 2024

Education

BSc in Software Development for Business (First Class Honours)
Glasgow Caledonian University
September 2023 — May 2025

HND in Computing Science (A)
City of Glasgow College
August 2021 — May 2023

Personal Projects

vinty.dev — Personal Portfolio Website (React/TypeScript & ASP.NET Core)

Personal portfolio site built with a React 19, TypeScript and Vite front end and an ASP.NET Core Web API (.NET 10) backend, deployed to Azure and showcasing projects, skills and work history.

- Implemented a database-backed API using Entity Framework Core and SQL Server to serve project and work-history content dynamically, rather than hardcoding it in the front end.
- Built a decoupled contact-form pipeline using Azure Storage Queues and an isolated-worker Azure Function to send email asynchronously via MailKit.
- Set up GitHub Actions CI/CD with PR-based staging environments for both the React front end (Azure Static Web Apps) and the API (Azure Container Apps).

jog — ADHD Management Mobile Application (Node.js/React Native)

Cross-platform honours project built using TypeScript-lead React Native, Expo and Firebase, with a focus on increased usability for inattentive, disengaging end-users.

- Followed a layered architectural design pattern to decouple functionality between presentation and business logic layers.
- Followed a waterfall-agile project lifecycle using an iterative feedback-integration loop via EAS updates.
- Utilised Firebase for real-time, asynchronous data storage and secure user authentication.
- Optimised with OpenAI's GPT-4o model embedded within a chat bot, automating daily life task management based on end-user prompts.

DrivePal — Driving Instructor Booking Network (C#/ASP.NET Core)

Full stack web application built using ASP.NET Core, Entity Framework and MSSQL for connecting learners and driving instructors.

- Implemented MVC architectural pattern using ASP.NET Core with Identity framework for role-based authentication and authorisation between learners and instructors.
- Utilised Entity Framework with a code-first approach for database schema generation and migration management with a dockerised MSSQL container.
- Integrated multiple APIs, including:
    - SignalR for real-time messaging
    - Stripe for payment processing
- Developed a responsive and cohesive front-end using Bootstrap, HTML, CSS and JavaScript with Razor markup for dynamic server-side rendering.
